**Subject:** NOAA Statement of 6 Sept 2019

Good Morning Dr Jacobs!

I am appalled at the official NOAA statement regarding the danger Dorian posed to Alabama that was released on September 6, 2019.

Using the data maps that are referenced in that statement & stoping the loop on September 1, when President Trump said, "In addition to Florida – South Carolina, North Carolina, Georgia, and Alabama, will most likely be hit (much) harder than anticipated," it clearly shows that only the very southeastern tip of Alabama might be effected by a 10% wind speed probability. This does NOT in any way support President Trump's warning.

Nor is his other statement, "But Alabama was hit very hard, and was going to be hit very hard, along with Georgia." - ring true as backed up by the NOAA loop.

You owe an apology to the Birmingham National Weather Service. An admirable leader supports the accurate actions and statements of their scientific department.

Regards,

Joan Lamare
